

Real World Augmented Supportive Care: Tech to Touch

Matthew Loscalzo, MSW

Professor/Executive Director

City of Hope National Medical Center,
Supportive Care Medicine

May 12, 2025
12:00-1:00pm MT

Zoom

After participating in this session, attendees will be able to:

- Understand strategies to gain administrative support for essential IT resources
- Know how to integrate IT team wisdom into clinical
- Be able to use priming language to motivate patients, their family members, and professional colleagues

Evolving technologies are indivisible from clinical care. Technological innovations are only expected to dramatically accelerate. Building more and stronger bridges among clinical care, research, education and training are inevitable and essential. We will share our experiences with a locally created digital screening instruments and a new Ecological Momentary Assessment (City of Hope Connecting Care: Education, Resources and Psychosocial Support). Taken from a clinical perspective, strategies for institutional engagement, identification of resources, testing, and implementation will be discussed in this highly interactive discussion.
